What is this?

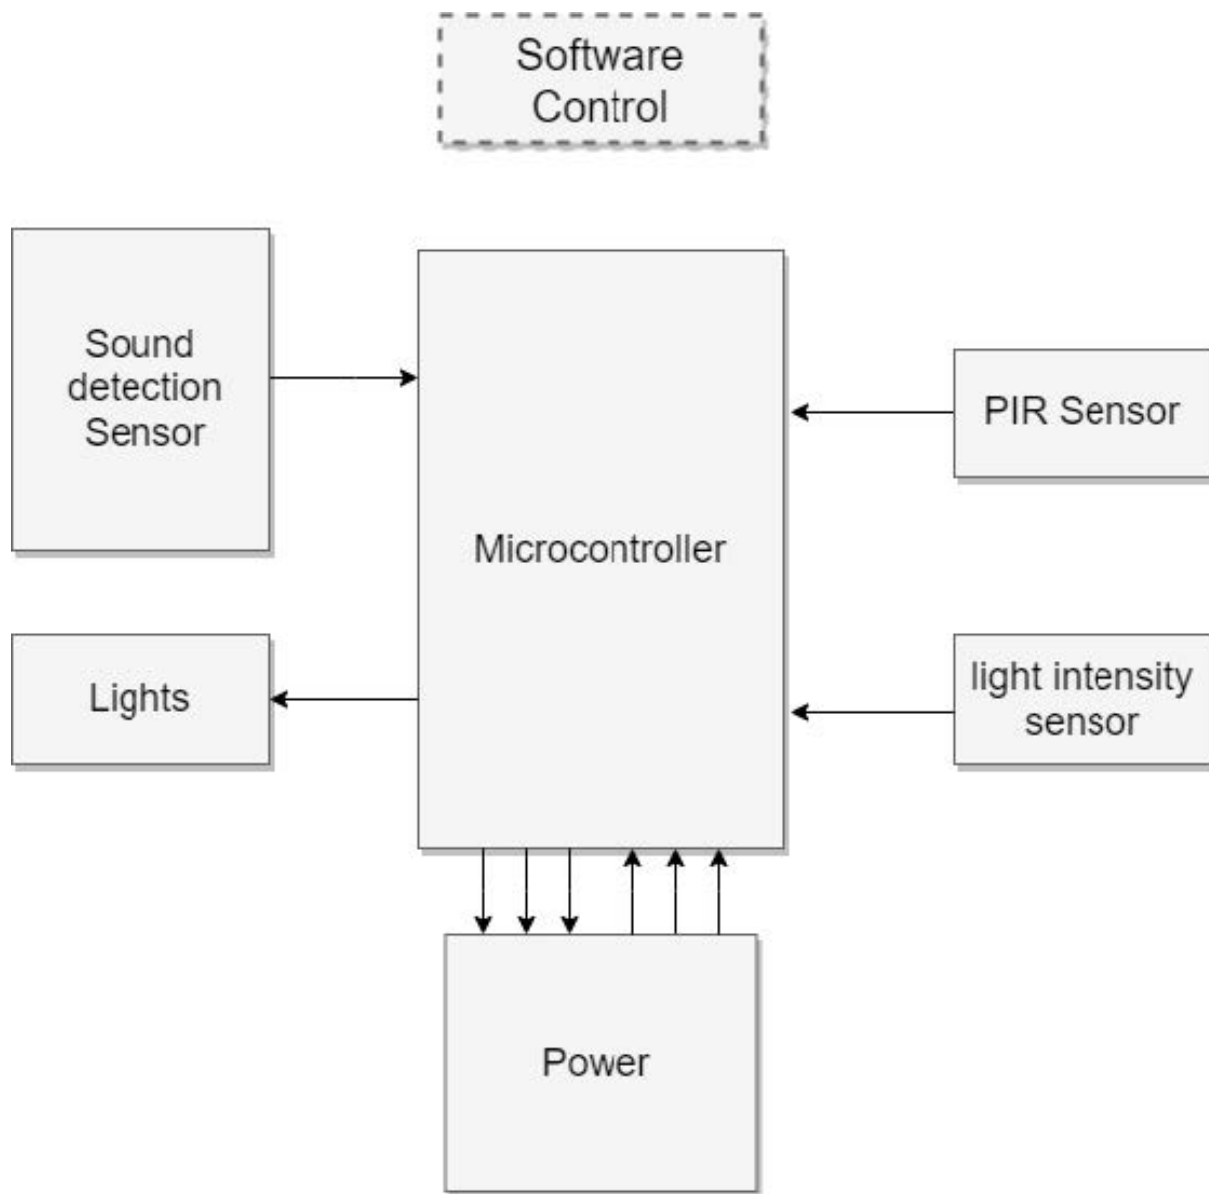

Form my project, I'm planning to make an automated light system that can protect your eyes from using a computer or tv in the dark and make you comfortable while reading or writing for a long period. Also, you don't need to worry about turning on the light or turning off the light anymore. This will be cheaper than other options in the market right now.

from this report, I'm trying to give a brief idea about how the system works and how the components are connected by using graphs. this has a state diagram, use case diagram, activity diagram, and component diagram.
